Summary

Motivated Django developer with experience building 30+ production-ready systems. Skilled in REST APIs, scalable backend architectures, and cloud deployment. Passionate about backend development, security and performance optimization.

Experience

SevenLabs

Lead Django Developer

Aug 2025 – Present

- Developed HCRM project integrated with webhook and VAPI AI assistant and successfully deployed in VPS.
- Leading the backend development team, overseeing architecture design, code quality, and deployment pipelines.
- Coordinating with cross-functional teams to deliver high quality, production-ready applications.

Freelance

Django Developer

Jan 2024 – Aug 2025

- Delivered 30+ production-ready Django-based systems, including eCommerce platforms, secure file-sharing apps, university transportation systems, and AI-powered resume ranking solutions.
- Integrated REST APIs, MySQL databases, session-based authentication, and Celery for background task processing.
- Applied software engineering principles to build scalable, modular backend architectures.

Projects

- Hospital Customer Relation Management (HCRM):**
Created webhook to view real time data sent from Hospital AI by SSE method in Dashboard. Integrated VAPI AI for simultaneous call and booking appointments. Generate prescriptions and other necessary advices.
- Live Crypto Quotes**
Live Crypto Tracker is a real-time Crypto monitoring platform built with Django, Celery, and Channels. It fetches and updates live stock prices periodically and pushes updates to users instantly via WebSockets, ensuring fast and accurate financial data delivery.

- Resume Ranking AI by Django**
Resume Ranking AI by Django is an AI-powered resume screening system that ranks resumes based on job descriptions. It uses Django, and Machine Learning to analyze skills, experience, and qualifications. Features include PDF/DOCX parsing, skill matching, and REST API support. Easily customizable and integrates with HR systems.

- NovaShare**
NovaShare is a secure file-sharing platform built with Django, featuring encrypted file uploads, role-based access control, and secure sharing via unique links. It ensures data privacy using AES encryption and allows users to set expiration and download limits. Future plans include cloud storage integration and real-time access logs.
